

# ENSC 351

Fall 2018

## Lab 4

### OpenMP

Deadline: October 24th, 2018  
Last revision: October 18, 2018

Karol Swietlicki  
Simon Fraser University

## 1 Deja vu?

It appears that at least once per term a lab goes south and I launch a simpler lab next week to make people's lives easier.

This term's no different.

## 2 The task at hand

Take your MapReduce from the previous lab, remove all references to pthreads and/or C++ threads. Replace them with OpenMP pragmas.

That's it. I suspect this won't take much more than an hour.

Submit the code for your word counting MapReduce which uses OpenMP to CourSys.

## 3 Makefiles

Your code must build with a makefile.
